

“Improved functionalities of SportEvac lend credible realism to the users’ experience and understanding of their venue vulnerabilities and operational solutions”

Dr. Lou Marciani, NCS4 Director

SPORTEVAC KEY BENEFITS

Manage situation through effective data-driven ‘what if’ scenario based timely decisions, preparedness, and response

Minimize risks and liability exposure through effective risk and emergency management

Maximize safety, visitor experience and revenue through effective training, operations, planning, and continuous improvements

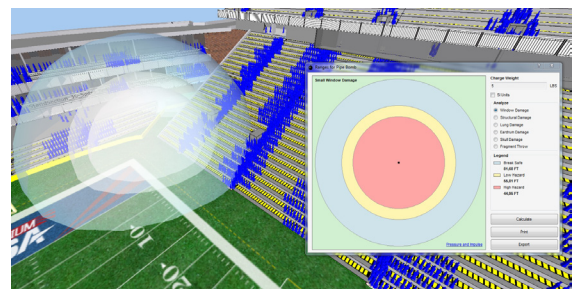

SportEvac: Training, Operation and Planning Software for your venue. Ensure the safety of your visitors...

INTRODUCTION

All major sporting event organizers face great challenges in the development and enhancement of effective emergency management capabilities. While many sports venues and event organizations have increased security preparedness and response capabilities and developed emergency plans in recent years, difficulty remains in preparing and training for the wide variety of emergencies that cannot be rehearsed in real life.

To help overcome these challenges, INCONTROL and the University of Southern Mississippi’s National Center for Spectator Sports Safety and Security (NCS) developed SportEvac computer-based 2D/3D modeling, simulation, visualization and reporting system for effective training, operation, planning and emergency management.

SportEvac is an operational GUI (graphical user interface) software application build-on INCONTROL best-of-breed Pedestrian Dynamics™ crowd simulation platform, NCS academic research, best practices and DHS guidelines.

SPORTEVAC

WHAT IS SPORTEVAC?

SportEvac provides those responsible for venue and event security, a software system to aid in their “what-if” scenario management, daily operations and staff training. It is an all-embracing software system that enhances the user(s) situational knowledge to optimize their decision making capabilities of preparedness, response and assessment. When using SportEvac, user(s) will be better prepared to mitigate, respond and recover from both natural or man-made crises and daily affairs.

WHO CAN USE SPORTEVAC?

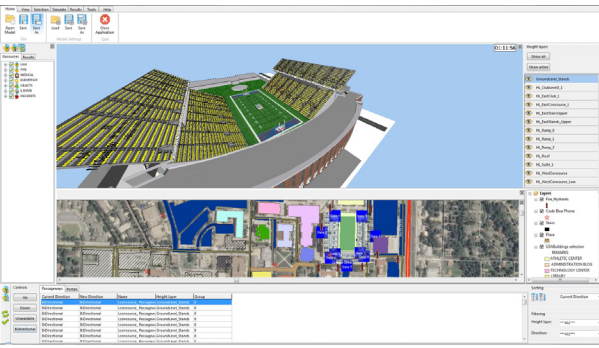

Sports, special event, and venue managers, decision makers, policy makers, as well as the emergency response team can use SportEvac for their overall management, planning, and training. From first responders to senior sport event officials, users can assess their preparedness and identify areas for improvement. SportEvac also fosters collaboration and development of community resolve in preparing for major incidents. Through the use of SportEvac, multi-agency teams within the public/private sector community can gain objective assessments of their capabilities so that gaps, deficiencies, and vulnerabilities are addressed prior to any actual incidents.

WHEN TO USE SPORTEVAC?

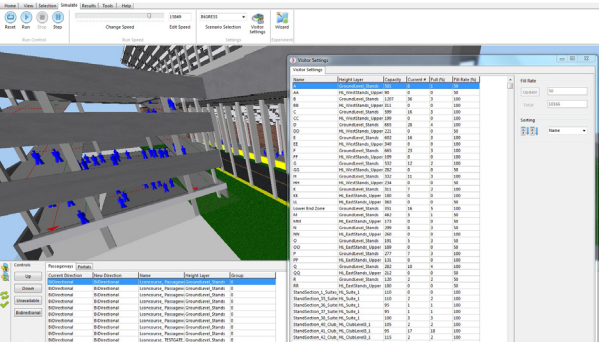

SportEvac can be used throughout the venue investment life-cycle phases; from the design-build reconstruction to validate real estate performance, safety and compliance to the day to day operations, risk management and emergency preparedness.

WHY USE SPORTEVAC?

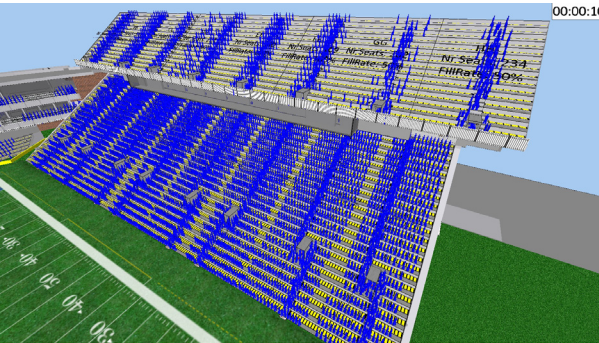

- SportEvac is a software system to assure the safety and experience of the visitors
- SportEvac can be customized to any stadium, arena, track, or open space environment
- Integrated tools, applications and data sources enhance situational knowledge and decision-making capabilities
- SportEvac lends credible realism to table-top exercises in a visual simulated format
- SportEvac aids in training and optimizing the preparedness of staff for different scenarios in a virtual, but realistic environment
- Validates training and helps practice strategic and tactical prevention, protection, response, and recovery capabilities
- SportEvac clarifies unified roles and responsibilities by enhancing multi-agency collaboration, coordination and communication
- “What-if” scenario training system can be incorporated into the sport event incident management training
- Aids the first responder community and supports their mission by enhancing preparedness, response and assessment capabilities
- Assess and validate sport safety and security policies, plans, procedures, training, equipment, assumptions, facility designs and interagency agreements
- Conduct sport stadium, arena and track evacuations and other emergency plan analysis
- Review sport safety and security gaps in resource and identify opportunities for safety, security and revenue improvements

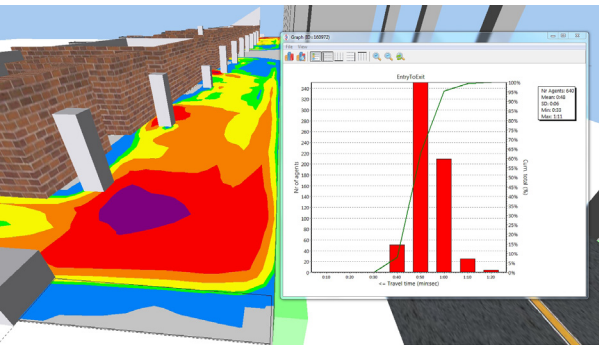

Integrated user interface

Easy Scenario Manager

State-of-the-art crowd simulation

Detailed output and reporting
